Solving Absolute Value Linear Inequalities - Practice

Algebra II | Unit 2 | Lesson 7 Practice | TEK A2.6.F

Objective: I can solve absolute value linear inequalities by isolating and splitting into a compound "and" or "or" inequality.

Section 1 — Recall

1. Solve $|x| < 7$.

2. Solve $|x| \geq 4$.

Section 2 — Apply

3. Solve $|x - 2| + 3 < 10$.

4. Solve $2|x + 1| \geq 14$.

Section 3 — Challenge

5. Solve $3|2x - 1| - 4 < 11$.

6. Solve $|3x + 2| + 6 \geq 20$.

Section 4 — Explain It

7. Explain why an inequality like $|x| < k$ becomes an "and" statement, while $|x| > k$ becomes an "or" statement.
